

KeTech Quality Policy

KeTech specialises in communication, information and detection technologies. As innovators and integrators of engineered solutions and developers of intelligent telecommunications systems, KeTech work across a range of vertical markets, predominantly transport.

KeTech aims to ensure that all engineered solutions, products and services it provides consistently meet clients' timescales, are within budget, to agreed specifications and meet all relevant statutory and regulatory requirements.

In order to achieve this, KeTech has developed and implemented a Business Management System (BMS) that meets the requirements of ISO 9001:2015 and this system is used to control the projects, solutions, products and services that KeTech develops, manages and delivers.

KeTech Management is committed to:

- continual improvement of the BMS through the utilisation of internal review findings and consideration of client feedback;
- promoting the use of a process approach and risk-based thinking;
- ensuring the availability of the resources necessary for the effective operation of the BMS;
- communicating the importance of effective quality management and of conforming to the BMS requirements to all stakeholders.

This Quality Policy is communicated to all KeTech staff at induction, team briefings and through policy updates posted on company notice boards and is available to clients and other interested parties on request.

The KeTech Management System Review process for the BMS provides the framework for ensuring this Quality Policy and quality objectives are aligned with the context and strategic direction of the Company.

This Policy may be amended as a result of Management System Reviews where necessary.
