KeTech Environmental Policy

KeTech specialises in communication, information and detection technologies. As innovators and integrators of engineered solutions and developers of intelligent telecommunications systems, KeTech work across a range of vertical markets, predominantly transport.

The nature of KeTech's business presents no significant risk to the environment. However, KeTech recognises its responsibilities in preventing pollution and protecting the environment and is committed to keeping environmental risk to a minimum, wherever practicable.
To this end KeTech will:

- regularly assess the risk and impact associated with business practices on the environment via its Business Continuity Planning process and other established risk management activities;
- ensure that all business activities comply with relevant environmental legislation, regulations and, where applicable, client specific environmental requirements;
- reduce the consumption of raw materials, minimise the use of environmentally sensitive materials and promote the use of recycled materials, where practicable, and reduce energy consumption and harmful emissions;
- ensure that all waste is minimised, managed, treated and disposed of in an environmentally acceptable manner;
- seek relationships with suppliers and contractors who have sound environmental policies (via the Supplier Evaluation Process); and
- commit to a culture of continuous improvement by ensuring its Environmental Policy is managed and reviewed as an integral component of the Company's Business Management System.

The requirements and responsibilities for ensuring good environmental practice will be communicated to all new joiners via KeTech's standard induction programme and to existing staff when changes in practice occur.

This Environmental Policy will be displayed in all KeTech offices, made available to the public upon request and will be reviewed annually as part of KeTech's Management System Review process and may be amended as a result of these reviews.
